

State of California
AIR RESOURCES BOARD

EXECUTIVE ORDER D-54-6
Relating to Exemptions under Section 27156
of the Vehicle Code

PRESTOLITE ELECTRICAL DIVISION
FORD (MOTORCRAFT) "BID BREAKERLESS INDUCTIVE IGNITION SYSTEM"

Pursuant to the authority vested in the Air Resources Board by Section 27156 of the Vehicle Code; and

Pursuant to the authority vested in the undersigned by Section 39515 of the Health and Safety Code and Executive Order G-30A;

IT IS ORDERED AND RESOLVED: That the installation of the "BID" breakerless inductive ignition system manufactured by the Prestolite Electrical Division, 511 Hamilton Street, Toledo, Ohio 43694, and marketed as indicated herein has been found to not reduce the effectiveness of required motor vehicle pollution control devices and, therefore, is exempt from the prohibitions of Section 27156 of the Vehicle Code for 1976 and older model year vehicles except as follows:

1. Those vehicles originally equipped with breakerless ignition systems or dual point ignition systems where one of the points is used to retard timing for emission control.
2. 1966-70 vehicles equipped with a retrofit NOx device which incorporates retard of basic ignition timing (i.e., Carter-CER, Echlin, STP-Air Computer, and AQP-Electro-NOx or Kar Kit).

This device consists of an electronic pack, trigger wheel and pick up assembly, Ford ignition coil and wiring harness. The following is a list of each device manufactured by the Prestolite Electrical Division and marketed for the following applications:

<u>Vehicle Application</u>	<u>Motorcraft Part Number</u>
Volkswagen-4 cylinder	DZ 5007
Toyota-4 cylinder	DZ 5008

This Executive Order is valid provided that installation instructions for this device will not recommend tuning the vehicle to specifications different from those listed by the vehicle manufacturer.

Changes made to the design or operating conditions of the device, as exempted by the Air Resources Board, that adversely affect the performance of a vehicle's pollution control system shall invalidate this Executive Order.

Marketing of this device using an identification other than that shown in this Executive Order or marketing of this device for an application other than those listed in this Executive Order shall be prohibited unless prior approval is obtained from the Air Resources Board.

This Executive Order does not constitute any opinion as to the effect that the use of this device may have on any warranty either expressed or implied by the vehicle manufacturer.

THIS EXECUTIVE ORDER DOES NOT CONSTITUTE A CERTIFICATION, ACCREDITATION, APPROVAL, OR ANY OTHER TYPE OF ENDORSEMENT BY THE AIR RESOURCES BOARD OF ANY CLAIMS OF THE APPLICANT CONCERNING ANTI-POLLUTION BENEFITS OR ANY ALLEGED BENEFITS OF THE PRESTOLITE ELECTRICAL DIVISION "BID" BREAKERLESS INDUCTIVE IGNITION SYSTEM ALSO MARKETED UNDER THE BRAND NAME MOTORCRAFT.

No claim of any kind, such as "Approved by Air Resources Board" may be made with respect to the action taken herein in any advertising or other oral or written communication.

Section 17500 of the Business and Professions Code makes untrue or misleading advertising unlawful, and Section 17534 makes violation punishable as a misdemeanor.

Section 43644 of the Health and Safety Code provides as follows:

"43644. (a) No person shall install, sell, offer for sale, or advertise, or, except in an application to the state board for certification of a device, represent, any device as a motor vehicle pollution control device for use on any used motor vehicle unless that device has been certified by the state board. No person shall sell, offer for sale, advertise, or represent any motor vehicle pollution control device as a certified device which, in fact, is not a certified device. Any violation of this subdivision is a misdemeanor."

Any apparent violation of the conditions of this Executive Order will be submitted to the Attorney General of California for such action as he deems advisable.

Executed at Sacramento, California, this 28th day of October, 1976.

Original Signed By

Thomas C. Austin
Deputy Executive Officer-Technical

State of California

AIR RESOURCES BOARD

August 31, 1976

Staff Report

(Addendum to Staff Report dated April 13, 1976)
Evaluation of Prestolite Electrical
Division "BID" Breakerless Inductive
Ignition System for Exemption
from the Prohibitions of Section 27156
of the Vehicle Code

I. Introduction

Prestolite Electrical Division, 511 Hamilton Street, Toledo, Ohio 43694, was issued Executive Order D-54-5 dated April 30, 1976.

This is an exemption from the prohibitions of Motor Vehicle Code Section 27156 for the Prestolite "Bid" Breakerless Ignition System which is also known by other brand names described in the Executive Order. The exemption was for certain 1976 and older model year vehicles equipped with a standard Kettering ignition system using device part numbers as specifically listed in the Executive Order.

The exemption did not apply to:

- 1) Those vehicles originally equipped with breakerless ignition systems or dual point ignition systems where one of the points is used to retard timing for emission control.
- 2) Those 1966 through 1970 vehicles equipped with "NOx retrofit devices" with a 4° retard in basic ignition timing (i.e., Carter, Echlin, STP Air Computer, AQP - Electro-NOx and Kar Kit).

Prestolite Electrical Division has now applied (Exhibit A) to add kits for Volkswagen and Toyota vehicle applications under the Brand Name of Motorcraft as follows:

<u>Vehicle Application</u>	<u>Motorcraft Part Number</u>
Volkswagen-4 cylinder	DZ 5007
Toyota-4 cylinder	DZ 5008

Prestolite Electrical Division also requests to allow usage of an equivalent Ford ignition coil instead of the Prestolite ignition coil part number P5-69 for the above vehicle applications.

II. System Description

The "BID" is a breakerless, retrofit ignition system utilizing a resonant, magnetic pick-up coil and a metallic "toothed" trigger wheel which is mounted concentric to the distributor shaft and lowers the magnetic field strength in the pick-up coil intermittently when each tooth passes the coil. This voltage reduction triggers a change in a unistable switch which controls a power switching transistor. This power transistor controls current flow to the primary of the ignition coil of the Kettering ignition system.

III. System Evaluation

The applicant submitted ignition timing data and electrical characteristics of the ignition system. In order to evaluate the new design of the device the applicant submitted baseline

data, device data with Prestolite coil as was previously exempted by Executive Order number D-54-5 and the new design device data which utilized the "Ford" coil. These data are presented in Tables I and II.

A review was made of the applicants test data and is considered within experimental and test variabilities and is evaluated as meeting the Air Resources Board's criteria. These results are as would be expected since the characteristics of the Ford coil (1.19 ohm primary resistance) are similar to the previously exempted system with Prestolite coil (1.3 ohm primary resistance). For these reasons an ARB confirmatory test is not required.

Cylinder to cylinder ignition timing for certain four cylinder Volkswagen applications did not match the manufacturers specifications. This condition is not considered acceptable under the revised Air Resources Board's Ignition Guidelines. Since this basic design was exempt by Executive Order D-54-5 prior to the change in criteria the staff accepts this proposal which does not expand the number of vehicle conversions but is essentially a brand name addition.

IV. Manufacturer's Claims

The benefits claimed by the manufacturer in the original application are discussed in the staff report dated April 13, 1976. The Air Resources Board notified the manufacturer that it did not fully agree with the benefits claimed. The manufacturer then submitted copies of their most recent advertising materials.

Some of their recent advertising is shown in exhibit B, certain excerpts are as follows:

- . Improved starting in temperatures as low as -20°F.
- . Improved performance at all speeds
- . Greatly extends spark plug life

A tune-up improves gas mileage, but after a few thousand miles, the tune-up begins to deteriorate, gas mileage drops off, and emissions increase. With the Prestolite Electronic Ignition System, spark plugs last longer, because timing and dwell are factory set and cannot change. That's why we say the tuned up engine stays tuned up longer, much longer.

More mileage in the aftermarket.

Increases plug life

Insures better wet and cold weather starting

Get more mileage in the aftermarket ... stock full

coverage Prestolite Electronic Ignition

The staff concurs that maintenance would be reduced by the "BID" Breakerless Inductive Ignition System due to removal of the points. It is the opinion of the staff that the device will not create increases in fuel economy, and operating performance over a properly tuned and maintained engine.

Starting conditions may be improved on the Volkswagen and Toyota vehicles with O.E.M. high resistance (3 to 4 ohms) primary ignition coils only. The manufacturers data showed an increase in spark energy at 200 RPM cranking speed and 9 volts source voltage when tested with the replacement coil.

V. Conclusions and Recommendations

It is the opinion of the staff that Prestolite Electrical Division's "BID" breakerless inductive ignition system will not reduce the effectiveness of required emission control systems except for certain 1966-70 vehicles retrofitted with a NOx control device utilizing a sustained retardation of 4 degrees crankshaft or more.

Therefore, it is recommended that Prestolite Electrical Division be granted an exemption from the prohibitions of Vehicle Code Section 27156 for its "BID" breakerless ignition system for 1976 and older model year domestic vehicles originally equipped with the standard Kettering ignition system except for the following:

- 1) Those vehicles originally equipped with breakerless ignition systems or dual point ignition systems where one of the points is used to retard timing for emission control.
- 2) 1966-70 vehicles equipped with a retrofit NOx device which incorporates retard of basic ignition timing (i.e., Carter - CER, Echlin, STP-Air Computer, and AQP-Electro-NOx or Kar Kit).

ATTN: Mr. G. Haas

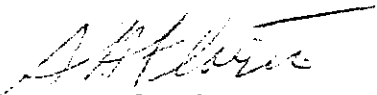

Dear Sir:

As you know we have been approved for sale in the state of California on our electronic BID ignition system which is used on four (4) cylinder foreign vehicles. Our system for this application, in California, requires the incorporation of a special coil (our #5-69) as part of the kit. Ford Motor Company is presently buying this system from us and we are packaging the system under the Motorcraft label. Ford Motor Company has asked us if instead of buying our coil for this application if they could use their own, since they are in the ignition coil business. The Ford coil is, for all practical purpose, exactly the same as our #5-69. I have run tests using the Ford proposed coil with our system comparing to baseline as well as supplying our data with the results using our coil (data enclosed). As you can see theirs is practically the same.

We would appreciate it if you could have this data critiqued and allow Ford to utilize their coil with our system.

Very truly yours,

----------------	-----------------	----------------	---------

Thanks to developments in electronic technology, Prestolite engineers surpassed the two previous achievements with the development of BID—Breakerless Inductive Discharge ignition.

As you can see, BID is the result of years of research and a series of design & performance improvements culminating in what we believe to be truly the ignition system of tomorrow.

Already it has been thoroughly tested in hundreds of thousands of miles of use. Reports indicate continued tuned performance after 10 or 12 thousand miles, when performance normally falls off.

Here is an electronic ignition system that makes your car's ignition as new as tomorrow.

PRESTOLITE
GIVES YOU
ALL OF THESE

BID

FEATURES AND ADVANTAGES!

- Improved starting in temperatures as low as -20°F .
- Improved performance at all speeds
- Fires spark plugs at any RPM above 0
- Fires spark plugs with as little as 6 volts available battery voltage
- Greatly extends spark plug life
- Uses existing coil, distributor cap, rotor and spark plug wires
- Is easily installed without removing distributor
- Protected against reverse polarity

A tune-up improves gas mileage, but after a few thousand miles, the tune-up begins to deteriorate, gas mileage drops off, and emissions increase. With the Prestolite Electronic Ignition System, spark plugs last longer, because timing and dwell are factory set and cannot change. That's why we say the tuned up engine stays tuned up longer, much longer.

Prestolite is the only independent ignition manufacturer furnishing an electronic ignition system to one of the Big Four car makers.

MORE MILEAGE IN THE AFTERMARKET

Add these seven to the already established Prestolite performance-proven 6 and 8 cylinder Electronic Ignition kits and you have real profit opportunity.

- Easy to install
- Fires plugs at low rpm
- Increases plug life
- Insures better wet and cold weather starting

Get more mileage in the aftermarket...stock full coverage Prestolite® Electronic Ignition
